

Free oral cancer screening

Is a killer hiding right under your nose?

Each year in Australia, **5,000** individuals are newly diagnosed with head and neck cancer.

Studies now show that HPV (Human Papilloma Virus), a sexually transmitted virus, is one of the fastest growing cause of oral cancers. Patients are increasingly younger, healthier, and often non-smoking individuals.

Medical specialists can see or feel the pre-cancerous tissue changes, which might lead to a cancer.

Everyone over the age of 18 should be screened annually. The exam is painless and quick.

Free oral cancer screening - Three minutes that could save your life.

Date: Friday 26th July 2019

Time: 12.30 - 3.30

Location: Flinders Centre for Innovation In Cancer (FCIC)
